

PREFORMED™ Lineguards

General Recommendations

Preformed Lineguards are commonly used in distribution networks with a minimum support protection. Lineguards may also be used in transmission network applications.

Preformed Lineguards are intended to protect against abrasion, arc-over and may be used as patch rods designed to restore full conductivity and strength to conductors where damage is located outside the support area and does not exceed 25% of the outer strand layer.

Both in initial installation cost and in long-term cost, Preformed Lineguards virtually eliminate the possibility of conductor mechanical failure at support points.

Preformed Lineguards may be used as tap armour to protect conductors from wear and flash-over damage under hot-line taps.

For Application Procedures, visit the PLP website.

SAFETY CONSIDERATION

- This product is intended for a single (one-time) use and for the specified application, although it may be re-applied twice for re-tensioning within 90 days from initial installation.
- Do not modify this product in any way.
- This product is intended for use by qualified linemen only.
- When working in the area of energised line with this product, extra care should be taken to prevent accidental electrical contact.
- For proper performance and personal safety, be sure to select the proper size PREFORMED™ products before application.
- PREFORMED™ products are precision devices. To ensure proper performance, they should be stored in cartons under cover and handled carefully.
